

# NC Wildlife Commission Wildlife Habitat Program Regions

## Technical Assistance Biologists - Wildlife Habitat Program

These Technical Assistance Biologists (TABs) integrate wildlife management principles into land management practices used on private lands in North Carolina. They lead Agency efforts to identify suitable sites and implement early successional wildlife management through the Cooperative Upland habitat Restoration and Enhancement Program (CURE) and deliver the agency's programs directed toward habitat management on private lands throughout the state. These TABs provide free technical advice to landowners in North Carolina, manage the Agency's Corporate CURE Program, and serve as the Agency's primary liaisons for integrating U.S. Department of Agriculture (USDA) Farm Bill programs into effective tools for improving land management.
